WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

2000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 27 May 1944

The admission rate for All Causes rose slightly this week but the increase was not sufficient to interrupt seriously the downward trend which has been apparent since the week ending Feb. 5, 1944. The curve stands well below the 1943 curve for the corresponding week. The Potomac and Severn River Commands again reported the highest rate (816), the 4th District reported the lowest (394).

The respiratory disease rate was reported again this week at 140. This represents the first levelling off in the downward trend recorded since the week ending Apr. 1, 1944. The curve turned upward in the 3rd, 5th, 7th, and 11th Districts and in the Potomac and Severn River Commands. The highest rate (223) was reported for the 13th District, the lowest (67) for the 6th District.

The venereal disease rate, after a slight drop the previous week, rose again this week to 32. The 1944 curve continues to stand above the 1943 curve for the corresponding period. The highest rate (49) was reported for the 5th District, the lowest (17) for the 1st District.

Influenza and Catarrhal Fever. The rate for these infections rose slightly this week but not sufficiently to change the general trend downward. The curve lies well below the 1942 and 1943 curves for the corresponding weeks. The highest rate (168) was reported for the 3rd District, the lowest rate (51) for the 6th District.

Pneumonia--Broncho and Lobar. For the fourth consecutive week the rate for these infections was reported at 3. The curve stands at a point intermediate between the 1942 and the 1943 curves. The 3rd District reported the highest rate (7). The 4th District and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. The rate for atypical pneumonia was reported again at 2. The 1944 curve has stood almost consistently above the 1943 curve through the first five months of

CURRENT TRENDS--CONTD.

the year. The 11th District again reports the highest rate (6). The 4th and 6th Districts and the Potomac and Severn River Commands reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections dropped to 42. This is the lowest rate recorded since the first week in January 1944. The highest rate (79) was reported for the Potomac and Severn River Commands, the lowest (14) for the 6th District.

Rheumatic Fever, Acute. The rheumatic fever rate continued as in the previous week at 3. The 13th District reported the highest rate (16). The 1st District reported no cases.

Scarlet Fever. After a slight drop the previous week the scarlet fever curve returned to 5. The 1944 curve now stands somewhat below the 1943 curve but considerably above the 1942 curve for the corresponding periods. The scarlet fever curve turned upward in the 3rd, 5th, 9th, 11th, and 13th Districts and in the Potomac and Severn River Commands. The highest rate (37) was reported for the 13th District. The 4th, 6th, and 7th Districts reported no cases.

Cerebrospinal Fever, Meningococcic. After a period of six weeks with a rate below 0.40, the rate for this infection returned to 0.41 this week. The 1944 curve stands well below the 1943 curve but above the 1942 curve for the corresponding periods. In no District did the rate exceed 0.79. In five Districts and in the Potomac and Severn River Commands there were no cases reported.

Malaria. For the third consecutive week the malaria rate was reported at 2. The rate is below the 1943 rate but considerably above the 1942 rate for the corresponding weeks. The 11th District reported the highest rate (5). The 7th and 13th Districts reported no cases.

Measles. The measles rate continued at 6 this week and the 1944 curve stands above both the 1942 and the 1943 curves for the corresponding weeks. The highest rate (19) was reported for the 13th District and the lowest rate (0.93) for the 12th District.
